

SIMCRO™

SEKURUS™ INJECTOR

SELECTABLE

The Sekurus self-tenting injector has a radically different design. It provides greater safety and accuracy, saving money and time.

SIMCRO™

SEKURUS™ INJECTOR

12mL SELECTABLE | 20-STOP
2mL SELECTABLE | 2-STOP

A major animal health company issued Simcro with a demanding brief for a genuine two-stage safety injector that prevented self-injection without the risk of bruising the animal or causing it stress or discomfort.

Simcro's response to this brief was the Sekurus family of injectors. In particular, the self-tenting Injector from this family gives the user the ability to perform one handed subcutaneous injections. The patented double over-centre hinge system at the heart of Sekurus ensures operator safety while eliminating undue pressure on the animal to activate.

NEEDLE GUARD

The protective needle guard ensures the risk of self-injection is minimised even when the Sekurus is not in use.

REDUCED RISK OF NEEDLE BREAKAGE

The potential for needle breakage during operation is significantly reduced maintaining a high level of food chain integrity.

NEEDLE REMOVAL

The needle guard makes needle changeover a much safer and faster task, reducing the risk of needle-stick injuries.

INCREASED OPERATOR SPEED

Administration speed is greatly increased by proficient Sekurus operators.

TWO-STAGE SAFETY MECHANISM

The two-stage action unique to Sekurus ensures that administration of the pharmaceutical will not occur until the needle reaches maximum penetration depth.

ONE-HANDED SUBCUTANEOUS INJECTION

Administering a one-handed subcutaneous injection is far easier and less hazardous for the operator than two-handed techniques, particularly in confined spaces such as a cattle yards.

One-handed injection techniques are much less invasive of an animal's space, particularly in the head region, reducing stress and animal discomfort.

WORLD'S FIRST SELF-TENTING SAFETY INJECTOR

The Sekurus has won prestigious awards for its innovative design and proven accuracy. It reflects Simcro's commitment to the principles of animal welfare, operator safety, treatment efficacy, user experience and commercial viability.

The Sekurus range includes needle guards designed for perpendicular (intramuscular) and subcutaneous injection. Dose variants include multi-stop selectable 1mL, 2mL and 12mL options with other dose variants under development.
